Sports-Related Concussions in Youth: Improving the Science, Changing the Culture Committee on Sports-Related Concussions in Youth, Youth, and Families Board on Children, Institute of Medicine, National Research Council

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity.

Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. *Sports-Related Concussions in Youth* finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms.

The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to *Sports-Related Concussions in Youth*, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

From reader reviews:

Barbara Richardson:

Information is provisions for anyone to get better life, information presently can get by anyone from everywhere. The information can be a information or any news even restricted. What people must be consider any time those information which is from the former life are difficult to be find than now is taking seriously which one would work to believe or which one the resource are convinced. If you get the unstable resource then you understand it as your main information there will be huge disadvantage for you. All of those possibilities will not happen within you if you take Sports-Related Concussions in Youth: Improving the Science, Changing the Culture as your daily resource information.

Marie Nitta:

Sports-Related Concussions in Youth: Improving the Science, Changing the Culture can be one of your starter books that are good idea. We all recommend that straight away because this reserve has good vocabulary that could increase your knowledge in words, easy to understand, bit entertaining however delivering the information. The writer giving his/her effort to get every word into joy arrangement in writing Sports-Related Concussions in Youth: Improving the Science, Changing the Culture yet doesn't forget the main point, giving the reader the hottest and based confirm resource facts that maybe you can be one among it. This great information can easily drawn you into brand-new stage of crucial contemplating.

Glenna Monaghan:

Your reading 6th sense will not betray anyone, why because this Sports-Related Concussions in Youth: Improving the Science, Changing the Culture e-book written by well-known writer who really knows well how to make book which might be understand by anyone who all read the book. Written with good manner for you, dripping every ideas and producing skill only for eliminate your hunger then you still uncertainty Sports-Related Concussions in Youth: Improving the Science, Changing the Culture as good book but not only by the cover but also by the content. This is one publication that can break don't ascertain book by its handle, so do you still needing a different sixth sense to pick this specific!? Oh come on your reading sixth sense already said so why you have to listening to an additional sixth sense.

William Pettigrew:

Is it anyone who having spare time after that spend it whole day through watching television programs or just resting on the bed? Do you need something totally new? This Sports-Related Concussions in Youth: Improving the Science, Changing the Culture can be the solution, oh how comes? It's a book you know. You are and so out of date, spending your extra time by reading in this fresh era is common not a nerd activity. So what these guides have than the others?
